

Intellicheck Mobilisa Awarded Approximately \$3 Million by U.S. Navy to Expand Wireless Security “Aegeus” Buoy Program

Currently Deployed in Puget Sound and Potomac River; Company Seeks to Transition from R&D to Commercialization

PORT TOWNSEND, WA – September 13, 2011: [Intellicheck Mobilisa, Inc.](http://www.intellicheck.com) (NYSE Amex: IDN), a global leader in access control and wireless security systems, announces that the U.S. Navy has renewed its contract for funding Intellicheck Mobilisa’s wireless security “Aegeus” buoy program. The contract provides the company approximately \$3 million over a 12- to 18-month period for the buoy system.

With research and development funding for the program from the U.S. Navy since 2005, Intellicheck Mobilisa currently has seven buoys deployed in Puget Sound and one in the Potomac River. The buoy is a multipurpose system outfitted with environmental and security applications for our nation’s ports. It uses Intellicheck Mobilisa’s exclusive technology and serves as an antiterrorism asset for the Department of Homeland Security (DHS) through the detection of radiological dispersal devices (“dirty bombs”); a deployable asset for providing fleet support in ports; and an environmental asset through the testing for oil spills, pH, salinity levels and dissolved oxygen.

Steve Williams, Chief Executive Officer of Intellicheck Mobilisa, commented: “The U.S. Navy has long supported our buoy program, and this contract shows their commitment to what we have developed thus far. Security at our ports is a critical component for homeland defense, and our buoys provide a considerable amount of data to the U.S. Navy and DHS to protect us from environmental and enemy threats. The technology that we have developed for the buoy is world-class and we are working to transition the program from R&D to commercialization this year.”

About Intellicheck Mobilisa

Intellicheck Mobilisa is a leading technology company, developing and marketing wireless technology and identity systems for various applications including: mobile and handheld wireless devices for the government, military and commercial sectors. Products include the Defense ID system, an advanced ID card access control product currently protecting over 80 military and federal locations, and ID-Check, patented technology that instantly reads, analyzes, and verifies encoded data in magnetic stripes and barcodes on government-issue IDs from U.S. and Canadian jurisdictions for the financial, hospitality and retail sectors.
